

PILECAP

CONCRETE PILE REPAIR SYSTEM

PILECAP, Inc. offers the strongest structural repair in the marine industry for application on concrete piles, regardless of the size or shape. The patented PILECAP Friction Coupler System is designed to repair severely spalled and damaged sections.

The PILECAP System is a 100% structural jacket that provides a cost effective alternative to driving new piles. The PILECAP System can also be injected with grout or epoxy to fill voids and damaged areas. The existing steel, reinforcing mesh, or rebar rods remain internal and require minimal preparation and thus less time and hardware for installation.

When transferring the load to the structural jacket this system fully restores the structural integrity of an existing pile, thus providing a cost effective alternative to driving a new pile. By comparison to the outdated piling repair methods, this PILECAP System adds less weight to the piling and surpasses conventional repair methods with respect to longevity and durability. The PILECAP friction coupler system is the only system able to fully restore structural integrity of an existing pile.

If you have any further questions contact PILECAP Inc. at (913) 948-8340 or visit our website at www.Pilecapinc.com.

*The PILECOAT System has been tested to a 75+ year serviceability. US Patent No. 6.561.736
